ABOUT

Frontend Developer with many years of experience in creating responsive and cross-platform solutions. I specialize in developing websites and email templates that function seamlessly across various email clients and meet the highest standards of quality and compatibility.

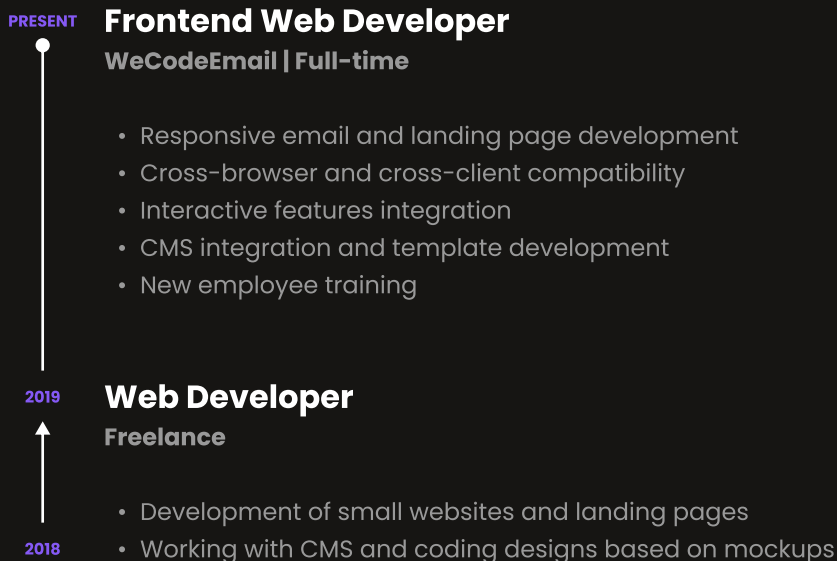

Throughout my career, I've built full-featured projects for platforms such as WordPress, HubSpot, Marketo, Klaviyo, Mailchimp, Pardot and others. My work involves the technical implementation of projects, development of interactive elements, and adaptation of finalized designs to meet specific technical requirements.

Areas of expertise:

- 1. Web Development:** Creating turnkey websites with modern designs, plugin integration, and custom solutions.
- 2. Email Templates:** Building responsive, client-compatible email designs that render consistently across platforms.
- 3. Training & Mentorship:** Teaching team members how to create emails and websites, guiding them in mastering essential tools and technologies for effective work.

Currently, I aim to enhance my skills in working with modern JavaScript frameworks to create even more interactive and efficient solutions that meet today's standards.
